

Hariharan P

Full Stack .NET Developer

Chennai, India | +91 7338804169 | hariharanpalani1@outlook.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

.NET Developer with **2+ years of production experience** developing and supporting **Hospital Management System (HMS)** workflows across clinical, billing, pharmacy, and administrative operations. Hands-on experience with **C#, ASP.NET Core, REST APIs, SQL Server, Oracle, and IIS**, focused on backend development, database operations, production troubleshooting, and healthcare workflows. Familiar with **Azure, Docker, microservices**.

Technical Skills

Core Development: C#, .NET, ASP.NET Core Web API, MVC, Entity Framework Core, LINQ, SQL Server, T-SQL, Stored Procedures, REST APIs, JavaScript, Git, IIS

Architecture & Design: SOLID Principles, Dependency Injection, Repository Pattern, Unit of Work, Layered Architecture, Design Patterns, Clean Architecture (familiarity), MediatR (basic)

Security: JWT Authentication, ASP.NET Core Identity, Role-Based Authorization, OAuth 2.0 (familiarity), HTTPS, Data Protection, OWASP Top 10 (awareness)

Cloud & DevOps: Microsoft Azure, Azure App Service, Azure SQL, Azure Key Vault (familiarity), Docker, GitHub Actions, Azure DevOps, CI/CD Pipelines

Messaging & Performance: Azure Service Bus (familiarity), RabbitMQ (basic), Redis (basic), Dapper, Polly, Background Services, Caching

Testing & Logging: xUnit, Moq, FluentValidation, Unit Testing, Integration Testing (basic), Serilog, Application Insights

Frontend: HTML5, CSS3, Bootstrap, JavaScript, AJAX, jQuery, React (basics)

Professional Experience

Cancer Institute (W.I.A)

Chennai, India

Software Developer – Hospital Management System

Jul. 2024 – Present

- Developed and maintained **HMS modules** covering registration, OPD/IPD, appointments, billing, pharmacy, laboratory, and clinical workflows using **C#, ASP.NET, SQL Server, and Oracle**; introduced multiple new modules (Lab, Nursing, Appointments) as part of migration from the legacy system.
- Developed and enhanced **RESTful APIs**, implementing request validation, business rules, database operations, exception handling, and structured API responses.
- Worked with **SQL Server and Oracle** to develop stored procedures, complex queries, joins, data validation, and reporting logic across clinical and billing datasets.
- Investigated and resolved **production issues across UI, application, API, and database layers**, tracing data flow and implementing fixes for reported workflows.
- Performed **data extraction, reconciliation, migration, and validation** between SQL Server and Oracle for clinical, billing, operational, and reporting requirements.
- Handled application releases and configuration on **IIS**, including deployment validation, configuration changes, troubleshooting, and post-release verification.

Projects

Biometric Attendance–ERP Integration | ASP.NET Core Web API, C#, SQL Server, REST API

- Developed an integration workflow between the **BioStar biometric attendance system** and the organization's ERP, transferring employee punch transactions from the BioStar database into the ERP database in near real-time.
- Replaced the previous bulk-push process (morning punches only at 12 PM and evening punches after 6 PM via manual intervention) with a direct API-based sync, eliminating data latency and enabling attendance data availability as soon as a punch is recorded.
- Implemented data extraction, transformation, validation, and **duplicate-handling logic** to map biometric records to ERP employee records and maintain data consistency during synchronization.

Hospital BI Reporting Application | ASP.NET Core MVC, C#, SQL Server, T-SQL, JavaScript, Bootstrap, IIS

- Developed a web-based **BI and operational reporting application** that retrieves hospital data directly from the core database and presents reports for finance and hospital operations teams, removing dependency on manual bills and Tally software.
- Built SQL-based reporting logic for **outstanding bills, revenue collection, service-wise collection, patient transactions, and operational metrics** using joins, aggregations, filters, and stored procedures.
- Implemented **search, date-range filtering, pagination, and report views** for analyzing hospital transaction data.
- Translated business requirements into **database queries and reporting workflows**, validating results against source HMIS data and resolving discrepancies.

Certifications & Education

Azure Developer Associate (AZ-204) – Preparation	
In Progress	
SRM University, Chennai	2022 – 2024
Master of Computer Applications (MCA) CGPA: 8.5	
SRM University, Chennai	2019 – 2022
Bachelor of Computer Science CGPA: 8.3
